# 1 BUSINESS-REQUIREMENT:

---

## 1.1 PROBLEM STATEMENT:

The Todo Application is designed to help users manage their daily tasks effectively.

You are tasked to develop a platform that provides access to a home page and enables users to add new todos with fields such as task, task description, and taskDate. It should offer features to edit and delete any todo entry. Additionally, a search function should also be included, allowing users to locate specific todos by name, description, or date, thereby enhancing the user's ability to organize and prioritize their tasks efficiently.

### 1.1.1 ToDo App:

**The Todo Application** allows you to:

1. Access the home page.
2. Should be able to add a new todo.
3. It can have basic fields like task, task description and taskDate.
4. Should be able to get the list of todos along with options to sort in ascending and descending order in each field.
5. Should be able to edit and delete any todo.
6. Should be able to search for a todo by name or description or date.

## 2. TEMPLATE CODE STRUCTURE:

### 2.1 TODO CONTROLLER

---

Method Exposed	Purpose
listTodos()	Should return page "list-todos" with required data.
showFormForAdd()	Should return page "add-todo-form" for adding an event.
saveTodo()	Should save a todo and return "todo/list" with required data.
showFormForUpdate()	Should show todo details in page "update-todo-form" to edit a todo.
deleteTodo()	Should delete a todo and return "todo/list" with required data.
searchTodos()	Should search a todo and return "list-todos" with required data.
updateStatus()	Should show and update the current status of todo task (Pending/Completed/Decline)

### 2.2 RESOURCES AVAILABLE:

---

Description	View Pages Name	Remarks
Common UI		
Home Page	list-todos	Contains a homepage which shows a list of all todos along with options to add, edit , delete, search and update status of a todo.
All todos	list-todos	
Add a todo	add-todo-form	
Update a todo	update-todo-form	
Search a todo	list-todos	

### 3 SUGGESTED WIREFRAMES:

#### 1. Homepage – Visitor Landing Page

A browser window showing a web application at localhost:8081/todo/list. The page has a title "Todo List". Below the title is an "Add Todo" button. There are two search bars: "Search By Todo Name/Desc" and "Search By Date" with a date picker set to "dd-mm-yyyy" and a "Search" button. Below the search bars is a table with the following headers: "S No.", "Task", "Description", "Date", "Current Status", and "Action". Each header has "Desc" and "Asc" links. The table body is empty, and a message "No Record Found" is displayed below it.

No Record Found

#### 2. Create a Todo

A browser window showing a web application at localhost:8081/todo/addTodoForm. The page has a title "Todos" and a subtitle "Add Todo". Below the subtitle is a form with three fields: "Task:" with a text input, "Task Description:" with a text area, and "Task Date:" with a date picker set to "dd-mm-yyyy". There is a "Save" button and a "Back to List" link below the form.

## 4 BUSINESS VALIDATIONS

---

1. Id must be of type id.
2. Task value should not be blank, min 2 and max 200 characters.
3. Description value should not be blank, min 2 and max 200 characters.
4. Task date value is not null and in format (yyyy-mm-dd).

## 5 CONSIDERATIONS

---

The Code template already contains skeleton methods for service and controller layer. Please write your logic in it.

## 6 EXECUTION STEPS TO FOLLOW

---

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers, need to go to Application menu  
(Three horizontal lines at left top) → Terminal → New Terminal
3. To build your project use command:  
**mvn clean package -Dmaven.test.skip**
4. To launch your application:  
**java -jar <your application war file name>**
5. This editor Auto Saves the code
6. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use **CTRL+Shift+B**-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
7. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
8. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.
9. This is a web-based application, to run the application on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

**Note: The application will not run in the local browser**

10. Default credentials for MySQL:

- a. Username: **root**
- b. Password: **pass@word1**

11. To login to mysql instance: Open new terminal and use following command:

- a. **sudo systemctl enable mysql**
- b. **sudo systemctl start mysql**

**NOTE:** After typing any of the above commands you might encounter any warnings.

**>> Please note that these warnings are expected and can be disregarded. Proceed to the next step.**

- c. **mysql -u root -p**

The last command will ask for password which is '**pass@word1**'

12. Mandatory: Before final submission run the following command:

**mvn test**

13. You need to use **CTRL+Shift+B** - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
